

SELF CLEAN™ HOLE SAW (800 Series)

U. S. Patent Number
7,189,036

FCT has created the new generation of hole saws in the Self Clean™ Hole Saw. Marine Manufacturers consulted with FCT in the design. The tool saws faster than the conventional hole saw and saves the user additional time because the design eliminates the need to remove the plug from the saw. It falls out of the tool when the cut is finished. The saw is made from high grade hardened steel, carbide tipped, and is designed specifically for cutting fiberglass. The quick change system increases productivity when moving from one hole size to another.

Replaces the
traditional hole saw !
