

## DEEP-COR™ HOLE SAW (808 Series)

The latest innovation from Forest City Tool! The Deep-Cor™ Hole Saw features a 3" depth of cut (twice the depth of standard hole saws). The Deep-Cor™ is the ideal tool to use when drilling through thick materials such as transoms for "thru-hull" exhaust holes or through bulkheads. These saws also boast a "trim tooth" that trims the plug generated by the saw and allows for easy extraction. Deep-Cor™ saws also feature long lasting carbide tips and hardened steel bodies. Unlike traditional hole saws, the FCT Deep-Cor™ is constructed with a fluted body and slotted walls which allows the saw to expel chips much faster than standard saws. The long plug generated by boring completely through the transom will typically fall out without assistance, saving boat builders time and money. As with all Forest City Tool products, the Deep-Cor™ saws can be re-sharpened or re-tipped as needed.

### 2-1/2" Transducer Drill

The Transducer Drill with Adjustable Stop was developed in response to the need for a drill that cuts a flat bottom hole for bilge mounted transducers, but also has a depth stop to prevent drilling too deep into the hull. It features a 2-1/2" carbide tipped 2 wing drill with 2 carbide outlining spurs ground to produce a flat bottom hole and a shank mounted adjustable depth stop. The depth stop simply slides on the shank and is locked into place with a set screw at the desired depth of cut.

8072500	2-1/2" 2-Wing Flat Bottom Transducer Drill w/Stop	\$202.49
