

CARBIDE TIPPED 3-WING DRILLS (803 Series) with QUICK CHANGE SHANK

FCT 3-Wing Drills eliminate the hassles associated with hole sawing in fiberglass and wood. 3-wing drills produce very clean accurate holes due to the outlining spur design without producing a plug to deal with like a hole saw. Accurate centering is ensured by the solid carbide replaceable point and tool life is exceptional even in abrasive fiberglass. FCT 3-wing drills will produce holes faster and easier than the traditional hole saw, thus ensuring maximum productivity in the marine manufacturing & composite environment. The 803 series includes a Quick Change Shank to make switching to a different size a snap. Tools perform equally well in handheld electric or pneumatic drills as well as boring machines and drill presses.

NOTE:

The 803 Series comes standard with a 3" shank. Request a 6" shank by adding an "L" to the product number. The additional cost is \$5.00.

Carbide Tipped 3-Wing Drills (803) with Quick Change Shank

Product #	Size	Recommended Rev/Min	Price
8030500	1/2	2500-3000	\$93.45

CARBIDE TIPPED 3-WING DRILLS (809 Series) with Pilot Drill

The 809 series has all the great attributes of the 803 series such as machined steel bodies and precision ground micro grain carbide. Additionally, the 809 series has a larger pilot drill that has been requested by manufacturers. The 809 series can be used with a pilot drill or pilot rod in applications where a 1/4" pre-drilled hole is used. This new series is excellent for drilling in all composite materials (like the 803 series) and is especially effective in soft, gummy materials such as **King Starboard**.
