

TRANSOM DRILL (804 & 805 Series)

In conjunction with the Marine Industry, FCT developed the transom drill to eliminate the problems associated with drilling through fiberglass and wood transoms. Due to the special parabolic flute design, chip packing problems are eliminated; thus, making short work of drilling through thick transoms. Micro-grain carbide tips and hardened steel bodies ensure maximum performance and durability. The FCT transom drill is ideal for drilling mounting holes for outdrive gimbal brackets, outboard engine brackets and drain holes. As with all of FCT boring products, the transom drill can be refurbished to new drill specifications.

SELF CENTERING TRANSOM DRILL (810 Series)

The 810 SERIES Self Centering Transom Drill has several design attributes that save the user money and time. Clean, accurate cuts in gelcoat with minimal chipping & "blowout"; "Climbing Flute" for easy chip evacuation (self cleaning - no "pecking"); point design produces no "walking"; extremely long life from the use of micrograin carbide tips. The 810 Series drills 2 times faster in thick composites than standard jobber drills and lasts 20 times longer than high speed steel jobber drills.
